

Breakthrough Technology

Until recently, only medium and light skin tones could safely receive laser skin treatment, while suntanned or darker skin tones faced an unacceptable degree of risk. However, a dramatic breakthrough in light technology now enables Isis to service all who walk through our doors. This next generation of laser advancement—the Cutera Coolglide XEO—is equipped with an optimal range of frequencies and longer wavelengths of light, allowing for the safe and effective treatment of all skin tones. There is no surgery, redness or scarring, nothing to heal. Just results.

Non-Invasive

At Isis Health Center, we believe that non-invasive methods represent safer and healthier alternatives for enhancing one's appearance. Non-invasive treatments do not require the cutting of body parts (surgery), nipping or tucking, no injection of foreign substances, or any other invasive methods that may pose a health risk. There is no redness or scarring. Every client will be given an honest assessment of our ability to achieve their desired outcome as well as a review of alternative procedures available elsewhere. At Isis Health Center it is our aim to achieve natural and lasting results without the risks of injections and surgery.

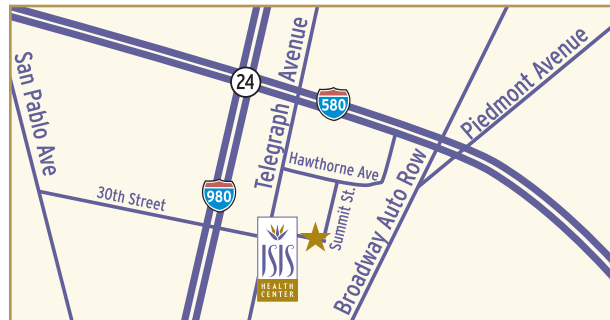

LOCATION & ATMOSPHERE:

Located in Oakland's "Pill Hill" medical community, Isis Health Center welcomes clients into an invigorating, therapeutic environment. Each client's medical and cosmetic concerns are treated with professional care and discretion.

COSMETICS:

Isis Health Center carries the most advanced, cosmetic skin care products available today. These medically-graded preparations help reverse aging, prevent skin cancer, and dramatically reduce under-eye circles, stretch marks, wrinkles and much more.

THE POWER OF LIGHT

An M.D. Operated Practice

The Power of Light

In the 1960s, science harnessed the power of light when it created LASER, a light beam so uniquely in phase with itself that it can be focused as precisely as a single wavelength. Since that time, laser has served the world in miraculous ways. A recent breakthrough application of this incredible power now makes it possible to naturally rejuvenate and repair damaged and depleted skin without redness or scarring. Isis Health Center offers the very latest techniques and equipment employing the miracle of harnessed light.

About Us

Ancient Egypt revered the Goddess Isis as the purest symbol of beauty. At Isis Health Center, we've taken that reverence to new heights, proving it daily with dramatic results in the creation of beautiful skin through natural means. At Isis Health Center, we virtually turn back time to create healthy, smooth skin, through the most recent laser advancements. Just as a healthy body depends on proper diet and exercise, healthy skin depends on the production of natural elements within the skin combined with proper skin care. Through laser—the power of light—we can safely and non-invasively stimulate the sleeping mechanisms and chemicals in our skin needed to quickly and continually repair itself. At Isis Health Center, we combine the latest technology in skin enhancement with carefully selected physician-grade products to achieve beautiful results. Our clinic is doctor-operated.

Client Experience with Genesis and Titan

Many who come to Isis Health Center say they just want to look as good on the outside as they feel on the inside. Some have even considered the option of cosmetic surgery, but were concerned about possible complications and irreversible results, not to mention the cost. They have been surprised and delighted at the ease and success of our procedures and the wide range of benefits. After the Isis experience, they enjoy hearing others say how well-rested, rejuvenated and happy they look. And how much younger. That's because Isis Health Center employs technology that encourages the natural processes of the body to tighten and smooth out skin. While results are usually noticeable immediately, the real bonus is the natural tightening that takes place constantly until you reach a peak months later. Even long after that, the rejuvenated mechanisms of natural restoration continue, working to counter the effects of aging. All this for a fraction of cosmetic surgery costs.

“TITAN”

Non-Invasive Facelift

Titan, a new light-based technology introduced in the US in September 2004, is safe and non-invasive. It dramatically lifts and tightens skin on the face, body and neck without redness, scarring or downtime. Remarkably, the Titan procedure reawakens and encourages long-term healthy collagen production, so even *after* the treatment, your skin continues to renew and replenish itself naturally. A safe, comfortable and non-surgical solution, Titan reverses signs of aging through precisely-directed light that contracts the skin's collagen, while protecting its surface through continuous cooling. The result is tighter skin, with a dramatic decrease in wrinkles, skin laxity and stretch marks.

Sphere of benefit: Smooths and tightens face, neck, and areas of stretch marks; treats scars, large pores, uneven skin texture and stretch marks on the body from child birth or weight fluctuations.

“GENESIS”

Skin Rejuvenation

Laser Genesis Skin Therapy uses advanced science to achieve vibrant, even skin tone and smooth texture in both men and women. Light penetrates deeply into the skin where collagen is manufactured, stimulating an increase of new collagen production. Unlike harsher methods, this is done without destroying the upper layers of skin (non-ablative). The Laser Genesis procedure safely, discretely and effectively treats scars, uneven textures, fine line wrinkles and large pores. The result is skin with smoother texture and a healthier appearance. The skin is gently warmed during this procedure, and daily activities may be resumed right away. This is truly a rejuvenating experience with no down-time.

Sphere of benefit: Improves skin's overall appearance, particularly on face and neck; evens out acne and other scars; tightens pores; decreases the appearance of fine line wrinkles; diffuses the excessive facial redness caused by rosacea.

LASER HAIR REMOVAL

Introducing the CoolGlide—a revolutionary hair removal system *specifically* formulated for men and women of all skin types and ethnicities. The CoolGlide system makes lasting hair removal and beautiful skin achievable for *all* skin types. Because people of color are particularly vulnerable to discoloration caused by ingrown hair, razor bumps and shaving, the permanent removal of unwanted hair is essential to achieve smooth, even skin tones. Over time, shaving, waxing, plucking and electrolysis can lead to diffuse darkening of the skin. It's now easy to eliminate the ritual burdens of outdated hair-removal methods forever, and enjoy smooth, healthy skin.

Sphere of benefit: Eliminate unwanted hair in any location; remove ingrown hairs and razors bumps

PIGMENTED LESION REMOVAL

Concentration of intense Pulse Light—or “IPL”—lessens or eliminates dark spots (pigmented or colored) on the skin caused by age and/or overexposure to the sun. These conditions are more common in fairer skin tones. Noticeable improvement of spots is usually seen within 1-2 treatments.

Sphere of benefit: Removal and lessening of age and sunspots anywhere on the body (most commonly on the face, chest, shoulders, arms and neck).

FACE AND LEG VEIN REMOVAL

Rather than inject the veins with foreign chemicals, we use light to redirect blood flow to the deeper veins below the skin's surface. This allows the veins closest to the skin's surface to regain their normal invisibility. Trouble veins typically disappear after 1 to 2 treatments. Other vascular lesions such as cherry angiomas, port-wine stains and hemangiomas can also be safely and effectively removed, even on children.

Sphere of benefit: Clearing of legs, face, any part of the body showing “spider veins,” varicose veins and deep blue veins; hemangiomas, port wine stains, venous lakes and other vascular lesions.
